

KAMAL KEWAT

SENIOR SOFTWARE ENGINEER

kamalnishad456@gmail.com | +91 88179 41549
Raipur, Chhattisgarh, India | github.com/KamalNishad

PROFESSIONAL SUMMARY

Senior Software Engineer with 8+ years of experience architecting and delivering scalable Android, cross-platform, and full-stack web applications across government and enterprise environments. Proven record of shipping 30+ production applications, including mission-critical platforms for the Election Commission of India and Chhattisgarh state government departments. Strong expertise in GIS/geospatial engineering, geofencing, and offline-first field-data solutions. Experienced in leading cross-functional teams, driving the full SDLC from requirements through deployment, and championing secure coding and application resiliency.

CORE SKILLS

- **Programming Languages:** Kotlin, Java, Jetpack Compose, Node.js, React Native, React JS
- **Tools & Frameworks:** Android Studio, Retrofit, Data Binding, Room DB, MVP/MVVM/Clean Architecture, Git, Agile/Scrum, CI/CD
- **Geospatial & Mapping:** Geofencing, Geotagging, Leaflet, OpenLayers, Mapbox, Google Maps API
- **Specializations:** SQL Server, Mobile App Development, Cloud-Native Development, Automation, Continuous Delivery
- **Methodologies:** Software Development Life Cycle (SDLC), Agile (Scrum, CI/CD), Application Resiliency & Security, Technical Evaluation & Integration

PROFESSIONAL EXPERIENCE

Assistant Programmer | Chhattisgarh Infotech & Promotion Society (CHIPS)

Aug 2021 – Present

- Delivered the mobile and web application supporting the Election Commission of India's Special Intensive Revision (SIR) of electoral rolls in Chhattisgarh, enabling large-scale, accurate voter data verification and field data collection.
- Executed innovative software solutions and conducted technical troubleshooting, resolving complex, cross-cutting technical challenges.
- Developed secure, production-grade code; reviewed and debugged peer code to maintain high quality standards.
- Led design and implementation of extensible features, improving application performance and stability.
- Evaluated and integrated new technologies and architectural designs into existing systems.
- Promoted a culture of diversity and inclusion within the engineering team.

Assistant Programmer – Android App | Cg Security Services, Raipur

Apr 2020 – Aug 2021

- Designed and developed Android applications with a focus on UI/UX and automation.
- Supported application localization to enhance accessibility for a wider user base.
- Resolved technical issues and enhanced application stability.

Software Developer | BlueBanyan Technologies Pvt. Ltd., Raipur

Nov 2018 – Sep 2019

- Developed user-friendly Android applications, integrated RESTful APIs, and managed source control with Git.
- Managed the software development lifecycle using Agile methodologies.
- Enhanced system resiliency and security.

Software Developer | Diligence Global Pvt. Ltd., Raipur

Apr 2017 – Nov 2018

- Led development of an e-commerce product with payment gateway integration.
- Utilized MVVM design patterns to build a clean, scalable codebase.
- Conducted technical evaluations and integrated new technologies.

KEY PROJECTS

CGRIDCL – Chhattisgarh Road & Infrastructure Development Corporation Ltd.

Infrastructure management platform enabling engineers, field staff, and officials to manage assets, monitor progress, and generate real-time reports from the field.

- Geo-tagged site management with GPS-based capture of project locations and site photographs.
- Centralized asset management with detailed asset records and full project history.
- Real-time work assignment and progress tracking with field status updates.
- Role-based secure access with reliable cloud-based data synchronization.

<https://play.google.com/store/apps/details?id=com.chips.cgrdc>

One Avinash

Official mobile application for the Avinash Group, a leading real-estate developer across residential, commercial, and retail sectors in Central India, enabling secure, GPS-tagged client data collection and documentation.

<https://apps.apple.com/gh/app/one-avinash/id6759089031>

WebMIS – Project Monitoring & Reporting System

Web-based MIS designed to streamline project tracking and reporting for construction and development projects, with an intuitive platform for progress, documents, and performance insights in real time.

- Interactive dashboards to track project timelines, milestones, and status updates.
- Automated monthly progress reporting for ongoing projects.
- File tracking and reporting with version control and activity logs.
- Built on Node.js and MySQL for a scalable, secure backend.

CG-ROFRA App

GIS-powered mobile app incorporating advanced geotagging, geofencing, and location-based analytics.

- Real-time geotagging for images and posts, linking geographic coordinates to spatial data.
- Dynamic geofencing to trigger location-based actions and improve user interaction.
- High-precision location tracking using GPS, Wi-Fi, and sensor data.
- Optimized geospatial data processing and battery usage for efficient real-time GIS insights.

SFC-eINFO App (Chhattisgarh Finance Commission Application)

Enables government employees to submit and track expense reports, capture and categorize receipts, and follow a streamlined approval process, with budget creation, tracking, forecasting, and variance analysis.

Rahul Travels – On Way Car

One-way car rental service application with day-wise driver charges and customer travel packages. Integrated PayUMoney and Razorpay payment gateways and a live chat support SDK. Built with Android Studio, Retrofit, and SQLite.

Lalluram (Android & iOS)

News portal application for the people of Chhattisgarh with OneSignal push notifications, built with Ionic, Android Studio, and Xcode. Owned requirements, design, coding, documentation, and unit testing.

https://play.google.com/store/apps/details?id=com.lalluram.news&hl=en_IN

Khanan Mitra

Mobile app developed under the guidance of DGMS for the Madhya Bharat Khan Suraksha Samiti (MBKSS) to improve safety and collaboration across the mining industry, connecting stakeholders from CEOs to workers on a single platform.

- Real-time dumper/excavator tracking to monitor machinery movement and reduce downtime.
- Fuel sensor data tracking for efficient equipment management.
- Speedometer notifications alerting on unsafe vehicle speeds.
- Safety outreach communication across all stakeholder levels.

EDUCATION

Bachelor of Engineering – Computer Science & Engineering

Columbia Institute of Engineering & Technology | Completed 2017

ACHIEVEMENTS

- Successfully delivered the mobile/web application for the Election Commission of India's Special Intensive Revision (SIR) of electoral rolls.
- Successful completion of the Parliamentary & Assembly Election 2023 project — a milestone achievement.
- Delivered 30+ production applications, including Android apps for School ERP systems, with consistently strong outcomes.
- Proficient in best-practice libraries including Dagger2, RxAndroid, Coroutines, Retrofit, and unit testing frameworks.
- Received an Appreciation Letter from Government Departments for project delivery.
